ST. CATHERINE OF SIENA SCHOOL
 SIMCOE MUSKOKA CATHOLIC DISTRICT SCHOOL BOARD
 BARRIE, ON

PEARSON ENGINEERING LTD. was retained for the upgrade to the existing St. Catherine of Siena School. The original school was built in 1999 and required the implementation of updated storm water control requirements. The onsite stormwater collection system contributes to a communal stormwater management (SWM) pond. The existing SWM controls were assessed and modifications completed as necessary. Detailed grading and servicing plans were completed. Onsite inspection services for certification of the contractors work was completed as well as coordination with the school board and City authorities.
